

Join us to learn more about Norfolk Utilities' Moores Bridges Water Treatment Plant. This surface water treatment plant was originally constructed in 1873 as Moores Bridges Pumping Station in Princess Anne County and has expanded over the last decade to be a key treatment plant serving multiple cities with a rated treatment capacity of 108 million gallons per day (MGD). The walking tour will guide us through the treatment process locations with Q&A throughout.

PRESENTED BY THE VWEA/VA AWWA EASTERN VA JOINT YP COMMITTEE
